| Sony                                | A9     |                                                                                                               |                  |                                     | When using ① cable:<br>1. After connecting the cable, be sure to power on the DJI RSC 2 before the camera. Otherwise, the DJI RSC 2 will not recognize the camera. If the camera is not recognized, restart the camera or remove and reconnect the cable to the camera.<br>2. Optical zoom can be controlled through the Ronin Focus Wheel (only lenses with built-in power zoom, such as the Sony E PZ 18-105 mm F4 G OSS). If a non-Power Zoom lens is mounted, the Focus Wheel will control digital zoom. Digital zoom must be enabled in your camera's settings.<br>3. After connecting with a Sony camera using the ① cable, if you need to swap to a camera of other manufacturers then a gimbal reboot is required.<br><br>When using ② cables:<br>1. Set the camera to MF mode.<br>2. Select "Network" and then turn off "Ctrl w/Smartphone".<br>3. Set the USB Connection to PC remote.<br>4. The Optical Image Stabilization of the camera will be disabled when using ② cable, but OIS of the lens will not be affected.<br>5. When using the focus control electronically, if the lens has AF/MF modes, set it to AF mode, otherwise the electronic focus control function cannot be used.<br>6.② cable and Ronin RavenEye Image Transmission System cannot be used at the same time.<br><br>Note: when using the ② cable, the camera may not be able to use playback. In this case, put the gimbal in sleep mode. |                                               | v6.0                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                       |       |

After connecting the cable, be sure to power on the DJI RSC 2 before the camera. Otherwise, the DJI RSC 2 will not recognize the camera. If the camera is not recognized, restart the camera or remove and reconnect the cable to the camera.<br>2. Optical zoom can be controlled through the Ronin Focus Wheel (only lenses with built-in power zoom, such as the Sony E PZ 18-105 mm F4 G OSS). If a non-Power Zoom lens is mounted, the Focus Wheel will control digital zoom. Digital zoom must be enabled in your camera's settings.<br>3. After connecting with a Sony camera using the ① cable, if you need to swap to a camera of other manufacturers then a gimbal reboot is required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | v1.10                                                 |       |

When ① cable is connected, the camera button function cannot be used, it can be used only after the gimbal is in sleep mode or the ① cable is pulled.<br>2. To connect the ① cable, you need to set the USB mode to "Camera Control" in the system menu.<br>3. When pulling focus electronically, you need to set the constant auto focus to "off" in the focus menu.<br>4.In the video mode, if gimbal controls the camera to take pictures, the gimbal cannot control the camera. You need to restart the camera to make the gimbal control the camera again.<br><br>Note: currently only the front dial is supported to set camera parameters, the APP does not currently support it | NO                                                | v6.6                                                                                                                                                                                                              |

To connect the ① cable, select the "computer + camera" icon displayed on the camera screen.<br>2. To connect the ① cable, during the recording process, the camera cannot be controlled to trigger auto focus. |
| Z CAM            | Z CAM E2 | Z CAM will officially launch a dedicated control cable:<br>①DJI RSC 2 / RS 2 to Z CAM E2 control cable<br>②DJI RSC 2 / RS 2 to Z CAM E2 Flagship Series control cable | Start/stop recording video                                                                                            | ISO/Aperture                                                       | /<br><br>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                   | /                                                                                                                                                                                                                 |

2020.11.25

Notes:

1. The current camera firmware version that was used during these compatibility tests.
2. The form will be continuously updated as more compatibility is added and is subject to change without notice.
3. The information in the lens compatibility table will be continuously updated after testing is completed. Other lenses not listed in the table may be compatible if mechanical balance can be achieved on the DJI RSC 2.
4. Some cameras may not be able to shoot when proper focus has not been achieved due to focus speed or in a complex environments such as low light situations. If there's an issue with the shutter or rec button not responding properly in these situations, manual focus mode is recommended.
5. When using intelligent functions such as timelapse, it is recommended to turn off the camera's auto review (Sony) or image confirmation (Canon) to reduce system latency.
6. Some cameras will draw power from the gimbal due to the limitations of the USB protocol which will have different effects on the battery life of DJI RSC 2.
